User Guide – Time Tracking

Employee Quick Guide

Access link: https://timetracking.insightarcs.com

Deutsche Version: ANLEITUNG.md · Full reference: USER_GUIDE.md

This quick guide explains the “Time Tracking” page. It is the single place where you record all your time:

• **Project time** – what you worked on, for which client and project

• **Working time without a project** – e.g. internal tasks, meetings, administration

• **Absences** – vacation, sick leave, special leave, parental leave

Note: The former tabs “Project Time” and “Working Hours” are now combined into one form and one list. What you see depends on your role (see “Who sees what?”).

What is the solution designed for?

Insight Arcs Time Tracking lets teams record their working hours in a way that is legally compliant and project-accurate:

• **Project-based time tracking:** time per project and task – the basis for reporting, invoicing (billable / non-billable) and forecasts.

• **Working time under the German Working Hours Act (ArbZG):** your daily working time incl. absences, even without a project.

All data is stored GDPR-compliant in Germany and archived GoBD-compliant (10-year retention, tamper-evident verification chain). The interface is bilingual (German / English); your language is saved per user.

Login & Navigation

1. Open https://timetracking.insightarcs.com in your browser and log in.

2. Click “Time Tracking” in the sidebar (desktop) or the bottom navigation bar (mobile).

3. Switch the language (German/English) at the top right of the header. The setting is saved.

4. Check your time zone once: click your name at the top right → “Time zone” (see section 4).

The page has three areas: **summary cards** (target / actual / difference), the **entry form**, and the **filter bar with the entry list**.

1. Summary cards

Visible to internal employees, project managers, admins and superadmins – not to external users.

Card	Meaning
Target hours	Working days × daily hours in the selected period (no weekends / public holidays)
Actual hours	Project time + working time without a project + credited absences
Difference	Actual − Target (green = surplus, red = short-fall)

• The cards follow the period chosen in the filter bar (default: “This month”).

• Vacation, sick leave and special leave on a working day are credited with your daily hours. Parental leave reduces the target.

• Older data with a working-time “frame” plus project times inside it is counted only once.

2. Recording time

a) Stopwatch (for ongoing work)

1. Choose the date, the project (optional for internal employees) and enter the task.

2. Select the entry mode “Stopwatch” and click “Start”.

3. Use “Pause” / “Resume” for interruptions – paused time is not counted.

4. Click “Stop & save” – the entry is booked with start and end time.

Note: The stopwatch keeps running after a reload. If it runs past midnight, the entry is booked on the day it was started.

b) Time range (for adding or correcting times)

1. Choose the date, the project (optional for internal employees) and enter the task.

2. Select the entry mode “Time range”.

3. Enter From, To and, if needed, Break (min). “Total” shows (End − Start) − Break live.

4. Click “Save entry”.

Note: If To is earlier than From (e.g. 22:00–02:00), the entry runs past midnight.

c) Absences (internal employees only)

1. Choose the date and the type: Vacation, Sick, Special leave or Parental leave.

2. “Full day” is ticked by default and credits your daily hours. For a partial absence, untick it and enter From / To.

3. Optionally add a note and click “Save entry”.

Billable and favorites

• “Billable” appears when a project is selected; the default comes from the project.

• Favorites appear as buttons above the form – one click fills in project, task and billable status.

How far into the future can I book?

• Vacation and parental leave: no limit.

• Everything else: up to the end of next month. Past dates are always possible unless the month is locked (GoBD month-end closing).

3. The entry list

• Filter by period, employee (privileged roles), type, client, project or free text.

• Entries are grouped by day (newest first) with a daily total and sorted by start time.

• ✏️ Edit loads the entry into the form; 🗑 Delete asks for confirmation.

• “Export CSV” downloads exactly the entries currently shown.

• Approval (if enabled for a project): Draft → Submitted → Approved. Without approval, entries are approved straight away.

Note: Entries in a locked month cannot be changed or deleted. All corrections are logged in the GoBD audit log.

4. Time zone (for colleagues abroad)

“Today” is determined by your local time zone, not German time.

1. Click your name at the top right of the header.

2. Under “Time zone”, keep “Automatic (device: …)” or choose a zone, e.g. America/Sao_Paulo. It is saved immediately.

• It sets the default date, the period presets, the stopwatch times and the future limit.

• Times are saved as entered (local clock time) and are not converted.

Note: When a project manager or admin books for a colleague, the colleague’s time zone applies. Without a setting, the device time zone is used (fallback: Europe/Berlin).

Who sees what?

	Internal	External	Project manager	Admin / Superadmin
Summary cards	own	–	own / selected	own / selected
Absences	yes	–	yes	yes
Project	optional	required	optional	optional
Log for colleague	–	–	yes	yes
Edit / delete	own	own	all visible	all visible
Approve in list	–	–	–	yes

Logging for a colleague: choose the person under “Log for colleague” in the form header. For external colleagues the project is required and absences are not available. The entry belongs to the colleague.

Frequently Asked Questions (brief)

Q: Do I have to set the language at every login?

A: No. Your last choice is saved in your profile.

Q: I forgot to start the stopwatch.

A: Use “Time range” and enter From/To afterwards.

Q: Are breaks deducted?

A: Yes, in time-range mode, when creating and when editing.

Q: Do I need a separate working day in addition to project times?

A: No. Project times already count as actual hours.

Q: I work outside Germany. Could my entries land on the wrong date?

A: No. “Today” comes from your time zone (profile or device). Check it under “Time zone” in the profile menu.
